

## Konversi File Excel Ke Access

1. Buatlah file excel dengan data sebagai berikut :

NIM	NAMA	NILAI
1111	IRMA	90
2222	YUSTIANA	95
3333	ADHEL	80
4444	SETIA	85
5555	TRISNA	70
6666	TARI	75
7777	DEWI	60
8888	YULI	70
9999	SANTI	80

2. Simpan file excel dengan nama sesuka anda
3. Buatlah file database dan simpan dengan nama sesuka anda
4. Buatlah form seperti gambar berikut :

Coding :

```
Private Sub Command1_Click()  
Dim FileExcel As String  
CDialog.DialogTitle = "Excel File"  
CDialog.Filter = "Excel (*.xls)|*.xls"  
CDialog.InitDir = App.Path  
CDialog.ShowOpen  
FileExcel = CDialog.FileName  
Text1 = FileExcel  
End Sub
```

```
Private Sub Command2_Click()  
CDialog.DialogTitle = "Access File"  
CDialog.Filter = "Excel (*.mdb)|*.mdb"  
CDialog.InitDir = App.Path  
CDialog.ShowOpen  
FileMDB = CDialog.FileName  
Text2 = FileMDB  
End Sub
```

```
Private Sub Command3_Click()  
On Error GoTo salah
```

```
If Text1 = "" Then
    MsgBox "file excel belum dipilih"
    Command1_Click
    Exit Sub
ElseIf Text2 = "" Then
    MsgBox "file database belum dipilih"
    Command2_Click
    Exit Sub
ElseIf Text3 = "" Then
    MsgBox "nama tabel baru belum diisi"
    Text3.SetFocus
    Exit Sub
End If
Dim con As New adodb.Connection
con.Open "Provider=Microsoft.Jet.OLEDB.4.0;Data Source= '" & Text2
& "'"
Dim strSQL As String
strSQL = "SELECT * INTO " & Text3 & " FROM [Sheet1$] IN '" & Text1 &
'"' ""Excel 8.0;
HDR=Yes;"" con.Execute
strSQL con.Close
Set con = Nothing
MsgBox "konversi dari excel ke acces telah
dilakukan" On Error GoTo 0
Exit Sub
salah:
MsgBox "Mungkin nama tabel sama, coba gunakan nama tabel
yang berbeda"
End Sub
```
